

Wiem Boubakri

Full-Stack and DevOps Engineer · Magento, React, React Native, Google Cloud

Sousse, Tunisia · boubakri.ict@gmail.com · +216 52 370 702 · linkedin.com/in/wièm-boubakri-493783202 · github.com/wiembk · wiembk.github.io

Summary

Full-stack and DevOps engineer on a production marketplace since 2023, working across the Magento 2 backend, the React seller and store dashboards, the React Native shopper app, and the Google Cloud infrastructure they run on. Built the Wamia store system (multi-user stores, RBAC, KYC, JWT) and the payment, finance, and commission logic behind it. Runs production: incident root cause, capacity, CI quality gates, and the Magento 2.4.8 / PHP 8.3 upgrade. Now building the next platform in NestJS and Next.js on Terraform and Cloud Run, with MFA and scoped RBAC from day one.

Experience

Full-Stack and DevOps Engineer, Wamia

Sousse, Tunisia · October 2024 - Present

- September 2026 - Present. Founded the next-generation platform in NestJS and Next.js on Cloud Run, fully provisioned with Terraform, with MFA, scoped RBAC, and a gated deploy pipeline from the first release.
- 2026. Own production operations for the Magento stack on Google Cloud: root-caused and fixed recurring outages, set up Prometheus and Grafana monitoring, and led the Magento 2.4.8 / PHP 8.3 upgrade.
- 2026. Introduced CI quality gates (PHPUnit, PHPStan, API and security tests) and redesigned the ClickToPay checkout to eliminate lost and duplicate orders.
- September 2025 - Present. Designed and built the Wamia store system: multi-user stores with RBAC, KYC, and JWT, plus the store dashboard for catalog, orders, commissions, and finance.
- 2025 - 2026. Shipped the React Native shopper app to the App Store and Google Play, including checkout with ClickToPay, orders, and returns.
- May 2025 - August 2025. Delivered Seller Pause and Meta Catalog Sync, and wrote the migration plan off the legacy marketplace.
- October 2024 - May 2025. Created the trilingual (FR/EN/AR) React seller dashboard and its CI/CD pipeline to Cloud Run.

Software Engineer and DevOps Engineer, OBG

January 2023 - October 2024

- Built the seller side of a Magento 2 marketplace: product creation, inventory, order management, invoice PDFs, and seller notifications.
- Implemented the commission engine for seller products, including tiered rates and variant handling.
- Automated product sync from Magento to Odoo ERP.

Key Achievements

- Works across three surfaces on one product: Magento backend and GraphQL, React dashboards, React Native app, and the release path for each.
- Production incidents closed with a documented root cause, from web tier to database.

Projects

Infrastructure as Code and Magento Deployment

ENET'Com · 2023 · <https://github.com/wiembk/magento-IAC> · <https://github.com/wiembk/magento-ec2>

- Designed a high-availability AWS architecture in CloudFormation across two availability zones: VPC, ALB, Auto Scaling, Aurora MySQL, Elasticsearch, ElastiCache, and S3.
- Automated the Magento installation on EC2 with Bash, wired to the provisioned services.

Education

Engineering Degree, Network and Cloud Infrastructure

ENET'Com, Sfax · 2020 - 2023

Preparatory Class, Mathematics and Physics

ESSTHS, Sousse · 2018 - 2020

Skills

Programming: PHP, TypeScript, JavaScript, Python, Bash, SQL

Frontend: React, Next.js, React Native, Expo, i18n (FR/EN/AR, RTL)

Backend: Magento 2, GraphQL, REST APIs, Node.js, NestJS

Security: JWT, RBAC, MFA (OTP, TOTP, passkeys), SSL/TLS

Quality and CI/CD: PHPUnit, PHPStan, API and security tests, GitLab CI/CD, GitHub Actions

DevOps: Linux, Docker, Nginx, Varnish, Terraform, CloudFormation, Prometheus, Grafana, incident root cause

Cloud: Google Cloud Platform (Compute Engine, Cloud Run, Cloud SQL, IAM), AWS (EC2, Aurora, S3, ALB), Cloudflare

Data: MySQL, MariaDB, PostgreSQL, Redis, Elasticsearch, RabbitMQ

Integrations: ClickToPay, Odoo ERP, Meta Catalog, App Store Connect, Google Play

Certifications

- AWS Cloud Practitioner Essentials
- DevOps on AWS Specialization
- Cloud Operations on AWS
- Azure Fundamentals
- Introduction to Programming Using Python
- Introduction to Git and GitHub
- Introduction to Network Automation
- Crash Course on Python
- IBM Full Stack Software Developer Professional Certificate (in progress)

Languages

English, C1. French, B1.
